

$$9x - 2 = 4 + 3x$$

Alex has nine packs of trading cards, each with the same number of cards. He gives away 2 cards and now has 4 cards more than three packs of trading cards. How many cards are in each pack?

Recovered Equation (e'_i^f)

$$9x - 2 = 4 + 3x$$

Recovered Equation (e'_i^f)

$$4 + 3x = 9x - 2$$

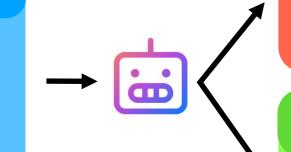

Reverse Equation (e_i^r)

$$4 + 3x = 9x - 2$$

Reverse Word Problem (w_i^r)

Sally has 4 candies and receives 3 candies for every sticker she has. Jimmy has 9 candies for every sticker he has but loses 2 candies. If they end up with the same number of candies, how many stickers do they each have?

Recovered Equation (e'_i^r)

$$9x - 2 = 4 + 3x$$

Recovered Equation (e'_i)

$$4 + 3x = 9x - 2$$
